Cargo Tie-down Straps

Cargo tie-down straps can increase the usefulness of your Cargo Cache. Otivia can supply the straps and slip-lock buckles or you can make your own.

The cargo tie-down straps are long enough to hold your notebooks, books, or laptop. They can be cinched up to hold your cell phone or PDA, in most cases.

The cargo tie-down straps are installed under the heads of the screws that secure the Cargo Cache to the bike rack.

Each strap is made from one inch wide poly-webbing – 34 to 36 inches long. Two holes are formed near the middle of each strap. The $\frac{1}{4}$ inch holes are spaced at 3.6 inches.

The ends of the straps are melted to keep the ends from fraying.

The slip-lock buckles slip onto either end of the straps – thus the straps can be cross-laced or they can run longitudinal with the bike.

Order a set of Cargo Cache straps for \$10 when you order your Cargo Cache. Solo orders will require an additional \$5 to cover shipping and handling.
